IN THE CLAIMS

Please amend the claims as follows:

| 1 | 1. (currently amended) A memod for displaying variable values within a software deoligger, |
|---|--|
| 2 | said method comprising: |
| 3 | extracting a plurality of variables from a program monitored by a software |
| 4 | debugger; |

allowing a user to designate a stopping point within said program and a subset of variables from said plurality of variables to be associated with said designated stopping point;

during an execution of said program within said software debugger, updating values of only said subset of variables when said execution of said program stopped at said designated stopping point; and

displaying said updated values of only said subset of variables.

- 2. (original) The method of Claim 1, wherein said stopping point is a breakpoint.
- 3. (original) The method of Claim 1, wherein said method further includes storing said designated stopping point and said subset of variables associated with said designated stopping point in a variable association table.

Amendment under 37 C.F.R. § 1.111

| 1 | 4. | (current | ily amend | led) A c | ompute | r p | rogram pr | oduct resid | ing o | n a comput | er usable | medium |
|---|-----|------------|-----------|----------|--------|-----|-----------|-------------|-------|------------|-----------|---------|
| 2 | for | displaying | variable | values | within | а | software | debugger, | said | computer | program | product |
| 3 | con | prising: | | | | | | | | | | |

program code means for extracting a plurality of variables from a program
monitored by a software debugger;

program code means for allowing a user to designate a stopping point within said program and a subset of variables from said plurality of variables to be associated with said designated stopping point;

program code means for updating values of <u>only</u> said subset of variables, during an execution of said program within said software debugger, when said execution of said program stopped at said designated stopping point; and

program code means for displaying said updated values of only said subset of variables.

- (original) The computer program product of Claim 4, wherein said stopping point is a breakpoint.
- 6. (original) The computer program product of Claim 4, wherein said computer program product further includes program code means for storing said designated stopping point and said subset of variables associated with said designated stopping point in a variable association table.

| 1 | 7. (currently amended) A computer system having a software debugger, said com- | puter | | | | | | | | | | |
|----|--|--------|--|--|--|--|--|--|--|--|--|--|
| 2 | system comprising: | | | | | | | | | | | |
| 3 | a processor; | | | | | | | | | | | |
| 4 | a monitor coupled to said processor; and | | | | | | | | | | | |
| 5 | a memory coupled to said processor, wherein said memory includes | | | | | | | | | | | |
| 6 | means for extracting a plurality of variables from a program monitored by | | | | | | | | | | | |
| 7 | a software debugger; | | | | | | | | | | | |
| 8 | means for allowing a user to designate a stopping point within | | | | | | | | | | | |
| 9 | program and a subset of variables from said plurality of variables | to be | | | | | | | | | | |
| 10 | associated with said designated stopping point; | | | | | | | | | | | |
| 11 | means for updating values of only said subset of variables, during | ıgan | | | | | | | | | | |
| 12 | execution of said program within said software debugger, when | said | | | | | | | | | | |
| 13 | execution of said program stopped at said designated stopping point | ; and | | | | | | | | | | |
| 14 | means for displaying said updated values of only said subset of varia | ables. | | | | | | | | | | |
| | | | | | | | | | | | | |
| 1 | 8. (original) The computer system of Claim 7, wherein said stopping point is a break | oint. | | | | | | | | | | |
| 1 | 9. (original) The computer system of Claim 7, wherein said computer system further inc | ludes | | | | | | | | | | |
| 2 | a variable association table for storing said designated stopping point and said subset of variables | | | | | | | | | | | |
| 3 | associated with said designated stopping point. | | | | | | | | | | | |
| | | | | | | | | | | | | |
| | | | | | | | | | | | | |

Please add Claims 10-12 as follows:

- 10. (new) The method of Claim 1, wherein said displaying further includes graying out a variable when displaying said variable if said variable is not one of said subset of variables.
- 1 11. (new) The computer program product of Claim 4, wherein said program code means for
- displaying further includes program code means for graying out a variable when displaying said
- yariable if said variable is not one of said subset of variables.
- 1 12. (new) The computer system of Claim 7, wherein said means for displaying further
- 2 includes means for graying out a variable when displaying said variable if said variable is not one
- 3 of said subset of variables.
